

01 · LOGO

The Level-Up mark

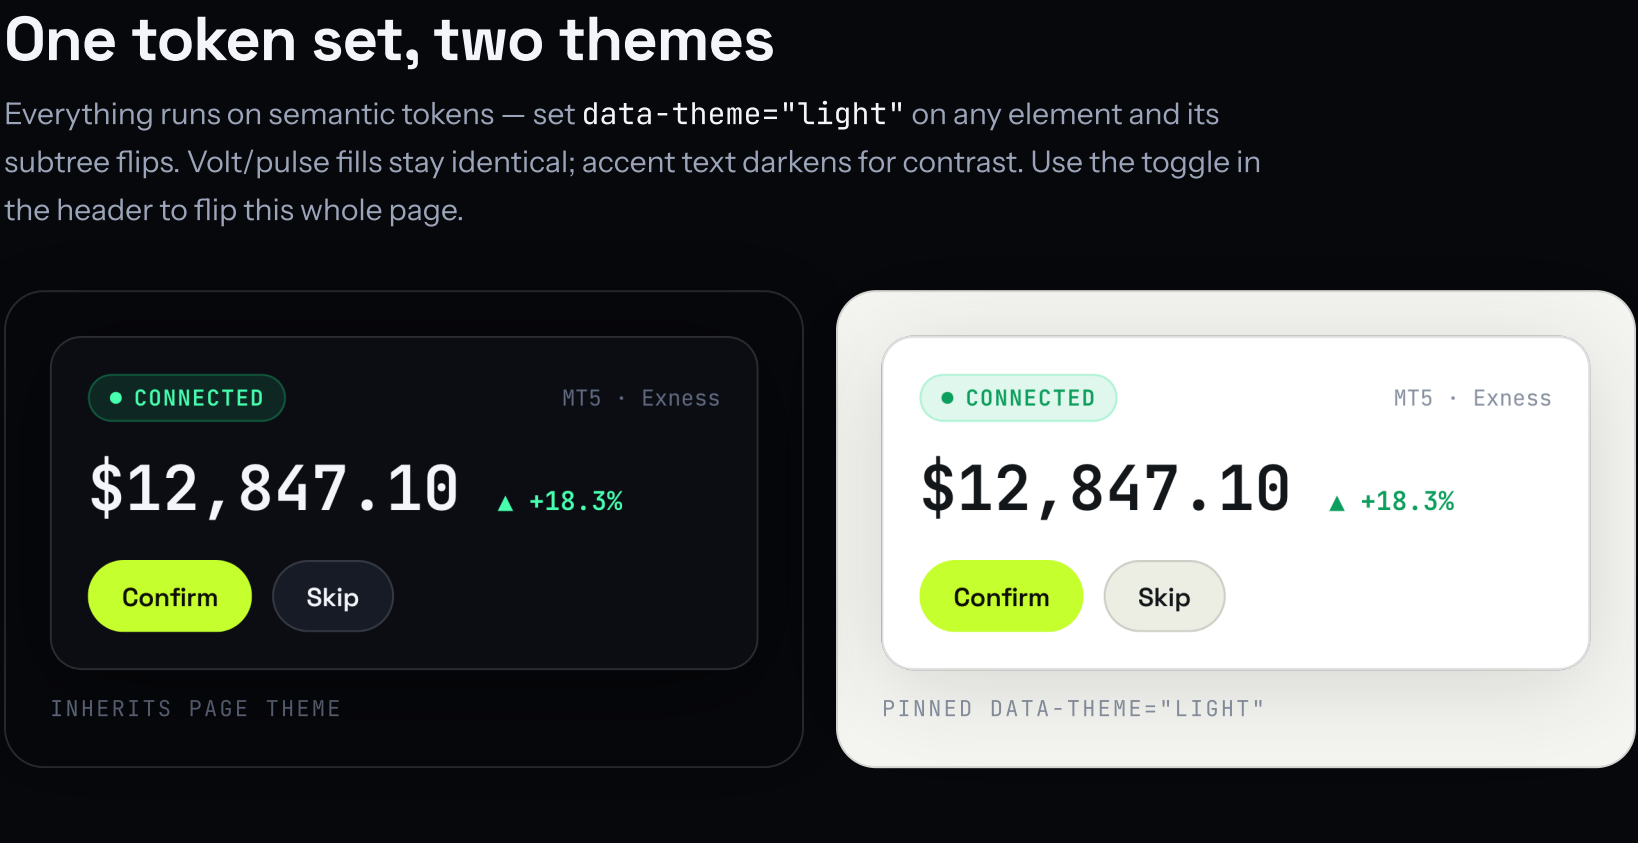

Double up-chevron; the gamer's "level up" fused with price-going-up. Wordmark is lowercase Space Grotesk Bold, tracking -0.04em. Clear space = ½ mark; min size 20px; never recolor, rotate or add gradients.

02 · COLOR

Volt on Ink

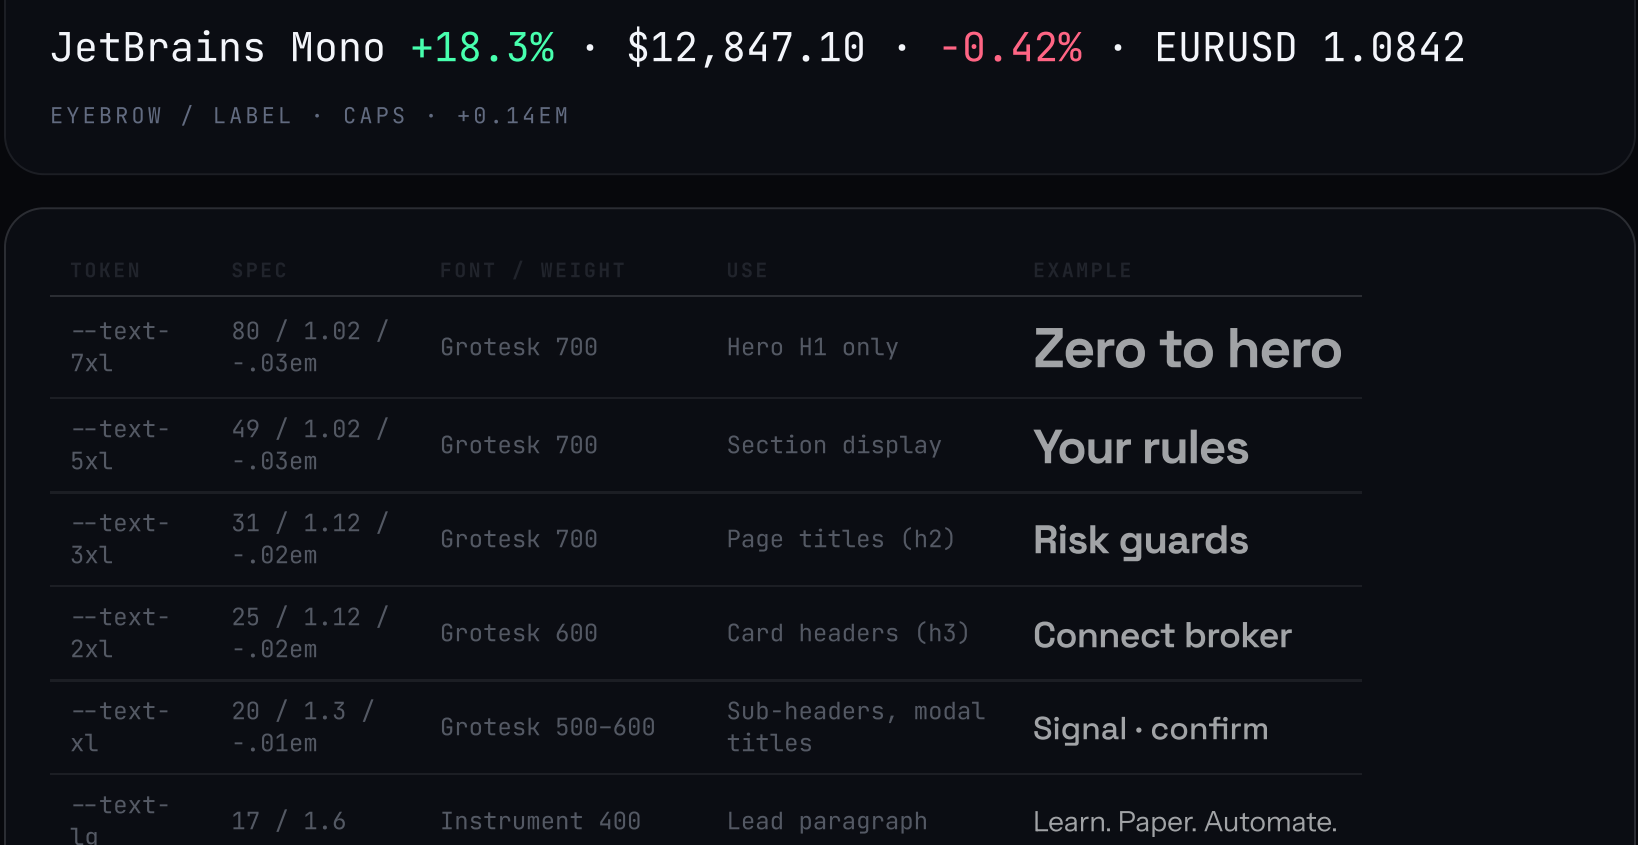

Near-black ink canvas. Volt lime is THE accent — actions, focus, brand. Pulse violet marks AI. Profit/loss are strictly semantic (money & markets only, never decoration).

02B · DARK & LIGHT MODE

One token set, two themes

Everything runs on semantic tokens — set `data-theme="Light"` on any element and its subtree flips. Volt/pulse fills stay identical; accent text darkens for contrast. Use the toggle in the header to flip this whole page.

03 · TYPOGRAPHY

Three voices

Space Grotesk for headlines & buttons · Instrument Sans for UI & body · JetBrains Mono for every number that matters.

Zero to hero, on autopilot.

Your rules, enforced — Space Grotesk 600

Instrument Sans body — Learn in the academy, practice on paper, then connect your broker. HeroPips enforces the rules you set. **Links are volt.**

04 · BUTTONS & CONTROLS

Actions

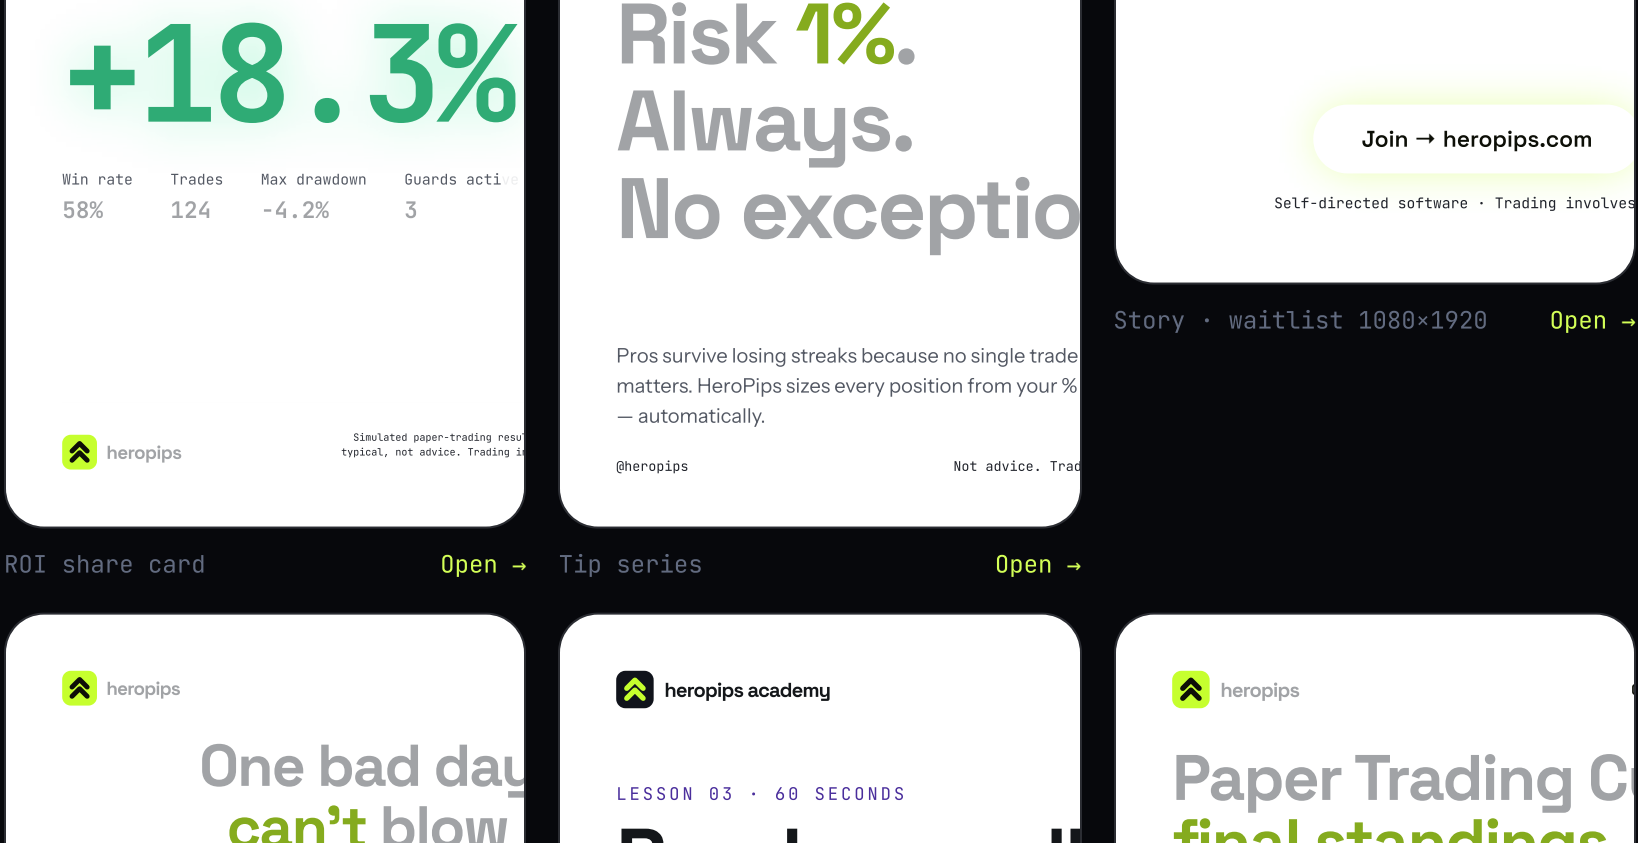

Pill buttons in Space Grotesk. One volt primary per view. Hover brightens + glows; press scales to .97.

05 · INPUTS, SELECTS & FORMS

Form language

Dark fields, 14px radius, volt focus ring. Mono for credentials & numbers. Errors are blunt and helpful. Try focusing the fields.

09 · LOADERS & MOTION

Waiting, the brand way

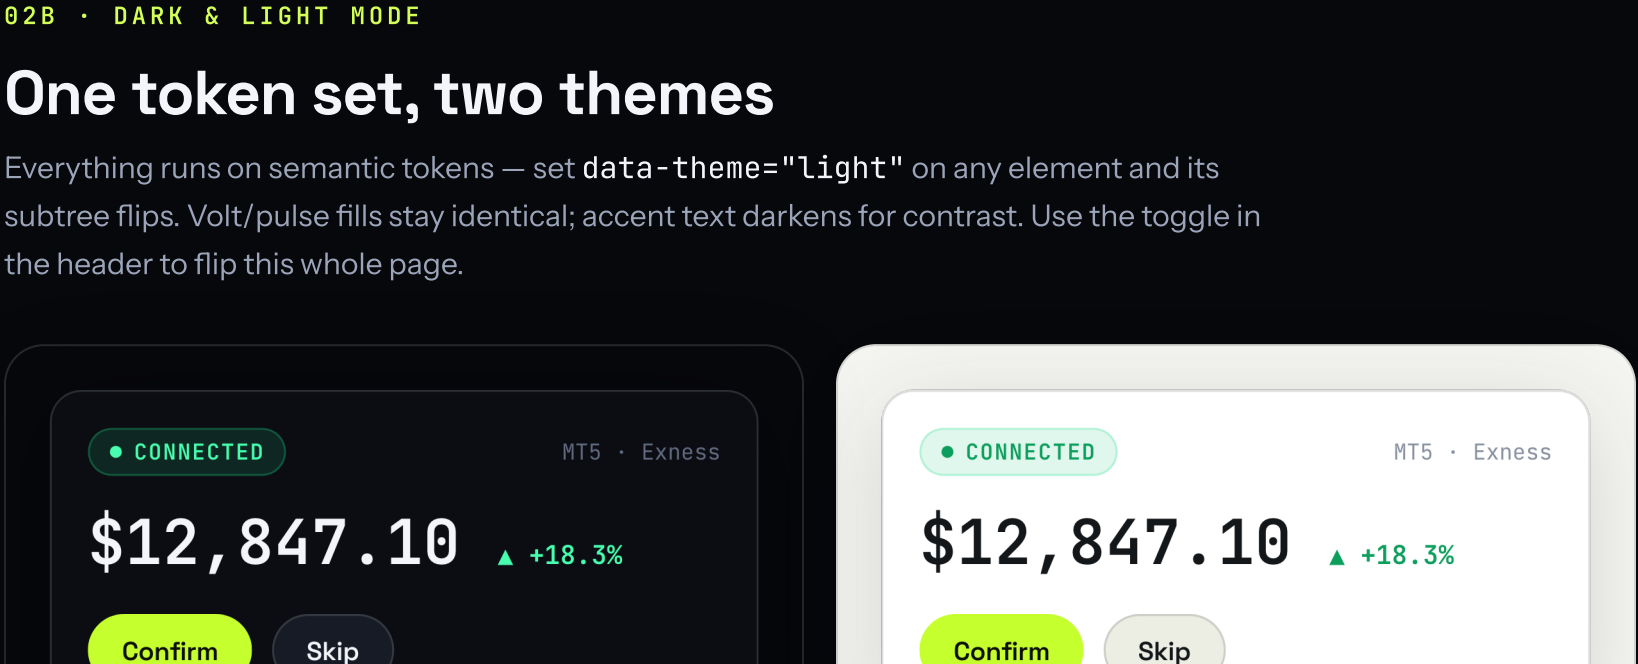

The level-up loader (chevrons climbing) is the primary page loader; spinner for inline waits; skeleton shimmer for data; XP-style progress bars. All CSS — export as GIF/Lottie for native surfaces.

10 · RESPONSIVE

1440 → 390, same system

Fluid page capped at 1180px. ≤1240 the hero stacks; ≤760 nav collapses and panels stack; ≤430 type steps down. Hit targets never drop below 44px; the risk disclaimer is never hidden.
